Meeting Customer Needs

For over 30 years Syntex Rubber Corporation has been committed to designing and manufacturing high quality stamped and molded parts for original equipment manufacturers worldwide. We have responded to our customers' needs for high performance parts with research and development; product design; modern manufacturing processes and equipment; and quality assurance programs. As a result our component parts are providing superior service on appliances, toys, sporting goods, electronic/electrical equipment and marine, automotive and aerospace equipment.

Syntex Rubber is a family business dedicated to product innovation and customer service. Our experienced management, technical, and production personnel are the foundation of our commitment to serve the needs of our customers. What was considered high quality rubber parts twenty or thirty years ago can no longer meet the exacting requirements of today's modern commercial and industrial products. Syntex Rubber has met the challenge with continued improvements in compounds and manufacturing processes. These ongoing upgrades enable us to provide our customers with the highest quality rubber products possible.
